

ROE-022 — Combined upgrade Phase 0 + identity

Epic documents the full combined audit+upgrade and dish-matrix backlog. This branch implements Phase 0 safety net plus identity enrich and venue alias parity only. Phases 1–5 become ROE-023+.

TICKET ROE-022	PARENT origin/staging	BRANCH feature/ROE-022- phase0-identity-safety	SCOPE Phase 0 + Do now
NEXT FREE ROE-023 (after ship)	STAGING v0-rasaoi- staging.vercel.app		

00 Story

Cognition still lives in the browser. Sync-pair twins can drift. Sparse dish identity makes vague and protein Asks collapse toward the same staples. Combined proposal: move scoring to Edge with named `J(x)`. Dish-matrix advice: hard gates + soft tags — not a 10-table join chain — and **do now** raise identity + alias parity.

ROE-022 ships the safety net every later phase needs: twin CI, edge rate limits, named client weights + parity, denser identity, alias checks. No dish invention. Lab promote gate stays.

01 Problem

LAYER	WHAT HURTS	SOURCE
Architecture	SPA owns veda/pairings; payload + jank	Combined §2–5
Maintainability	No CI drift gate on sync pairs	Backlog #1
Abuse / cost	Inconsistent edge rate limits	Backlog #2
Explainability	Weights not named as J components	Backlog #3
Catalog signal	Thin identity; venue key mismatches	Dish-matrix Do now
Vague Asks	Soft dials + overlapping menus → sameness	Dish-matrix §2–3

02 Acceptance (T1–T6)

- **T1** Twin CI for dietary / sanitize / mock-places; quality on PRs to staging
- **T2** Shared edge rate-limit helper; 429 shape; no secrets
- **T3** Named w_F...w_G; Vitest parity; still client scoring
- **T4** Identity enrich + rebuild culinary-index.json; no invented menus
- **T5** Matrix→restaurant alias parity report; Lab promote for misses
- **T6** Docs sync; next free ROE-023; CI harden

03 Story + task commits

Story branch: feature/ROE-022-phase0-identity-safety (from origin/staging)

[ROE-022][T1] add twin CI drift gate for dietary sanitize fixtures
[ROE-022][T2] add shared edge rate limits for invoke abuse control
[ROE-022][T3] name J score weights and add client parity fixtures
[ROE-022][T4] raise culinary identity coverage and rebuild index
[ROE-022][T5] add matrix restaurant alias parity check
[ROE-022][T6] sync docs and harden staging PR CI gates

Final push → Mozilla soak → approve → PR → merge staging

PRI	TASK	COMMIT	DONE LOOKS LIKE
P1	T1 Twin CI	[ROE-022][T1]	PR red on unpaired twin edit
P1	T2 Rate limits	[ROE-022][T2]	Burst → 429 + retry_after_ms
P1	T3 Named J	[ROE-022][T3]	Fixtures assert weights
P1	T4 Identity	[ROE-022][T4]	Coverage up; index rebuilt
P1	T5 Alias	[ROE-022][T5]	Matched / unmatched report
P1	T6 Docs/CI	[ROE-022][T6]	ROE-023 next; staging PR gates

04 Epic map → future ROEs

#	WORK ITEM	PHASE	NOW?	TICKET
1-3 + Do now	Twin CI, rate limits, named J, identity, aliases	0	YES	ROE-022 T1-T6
4-5	Shared scoring package + live culinary cache	1	NO	ROE-023
6 (+8)	score-reading dual-run (+ Apify review queue)	2	NO	ROE-024
7	Pareto plates + softmax alts on server	3	NO	ROE-025
9	Model-router + intent cache (prod flag)	4	NO	ROE-026
10-12	Telemetry loop, GL soft, server twin / Query	5	NO	ROE-027+

Explicit non-goals: 10-table join pipeline; gender hard-gates; clinical therapeutic ranking; auto-promote Apify → menu_items.

05 Test / deploy / guard

- Gates:** npm test, npm run lint, twin check script, Mozilla soak (vague Ask, meat not murgi, bare no meat, named-dish miss).
- Deploy:** Merge to staging only; redeploy edge if T2 touches Deno; no develop/prod until ROE-016 unlock.
- Guard:** Catalog plates only; sanitize after LLM; Ask-fulfillment first; Lab gate; no clinical claims.
